

Key Features

- Provides support for the LHD cable
- Provision for cable ties
- Stainless Steel
- Compliant with BS5839:1 requirements

The Proline J-Clip is a durable stainless-steel fixing designed for LHD cables.

Its unique design features a slot for securing a cable tie, ensuring a secure fit onto the J-Clip. This versatile J-Clip can be employed to support various types of heat detection cables, such as Proline Digital, EN54 Fixed, and Analogue linear cables.

The Proline J clips have been specifically developed to comply with the latest requirements detailed in BS 5839-1:2013 and BS 7671:2011+A3:2015. These standards recommend against the use of plastic clips due to the hazards they may pose, especially on escape routes.

With the lower bend of the 'J' acting as a ready-made support for our LHD cable, this enables the early stages of cable installation to be by-passed and allows the installer to maintain an additional point of contact, creating quicker installation times.

Technical Data

Material:	Stainless Steel
Dimensions:	20mm x 50mm x 20mm
Weight:	16g (each)

Ordering Information

Part Number	Description
A1149-100	Proline J Clip including Silicone Sleeve (100 per pack)
